Grafana Labs

Docs: No excuses!

The image shows a dual-screen view. On the left, the Grafana Labs documentation website is displayed. The navigation bar includes links for Installation, Administration, Configuration, Authentication (with sub-links for Overview, Auth Proxy, LDAP, and Enhanced LDAP), and LDAP Authentication. The main content area is titled "LDAP Authentication" and discusses the integration with third-party LDAP servers. On the right, a screenshot of the Grafana GitHub repository page for the file "ldap.md" is shown. The repository has 1,208 issues, 93 pull requests, 3 projects, and 26,963 stars. The commit history shows a recent update by mjtangan on Nov 29, 2018. An orange arrow points from the "History" button in the GitHub interface towards the bottom of the page, where the raw code for the "ldap.md" file is visible.

Localize time_format in graphs #1459

Open Alarmfifa opened this issue on 10 Feb 2015 · 73 comments

Alarmfifa commented on 10 Feb 2015

Hello dear developers team.
Thank you for a awesome product, but I have one problem.

Now there is a hadcoded US date format in [time_format function](#).
The most annoying case is display month and day. When I see something like
Is it "the second of Mart" or "the third of February"?
The most sad thing, that I can't to configure this behaviour.

The screenshot shows a Google Docs interface with the following content:

Realtime Datasource Plugin

Design Document
By David Kaltschmidt, June 2018
Status: RFC

As a researcher without a metrics storage I want to plot data as it becomes available.

Right now, there is no way to see live data

I have a stream of data available, that I can turn into any sort of JSON, but I cannot get it into Grafana:

1. All datasource plugins need some kind of storage backend
2. Graphs are updating only on preset refresh intervals.

Storage-dependent backends

Every panel needs a datasource to draw data from. All existing data sources rely on some kind of

How to fix small issues. For the reluctant contributor.
